

RUN CLUB ACADEMY · FROM LV

HOW TO SET UP YOUR CHART ON TRADINGVIEW

My layout, my indicators, my Fib settings, a one-click template and alerts. Your chart, set up like mine.

FROM LV · EDUCATION, NOT ADVICE

BEFORE YOU START

HI, IT'S LV

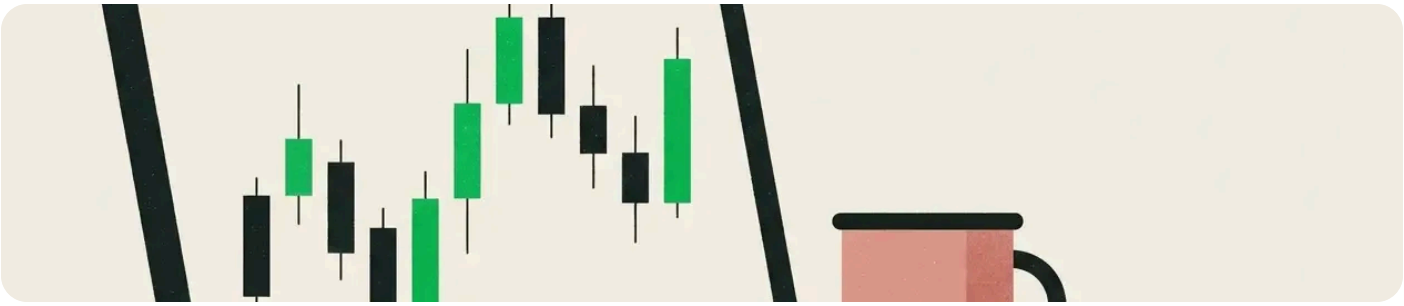

TradingView is where I read the chart before I touch anything. It's your mirror check before you walk out the door.

This guide gets your chart set up the way mine is, in about twenty minutes, and saves it so you never do it twice.

Setting up a chart doesn't make anyone a trader, but a clean chart makes learning a lot easier.

— LV

GET IN

01 OPEN YOUR ACCOUNT AND A CHART

Sign up for TradingView with my link: **runclubacademy.com/go/tradingview**. The free plan works for everything in this guide; a few things (like more indicators per chart, or some volume profile tools) need a paid plan. Start free and upgrade only if you hit a wall.

> LV may earn a commission or reward when you sign up through these links.

1. Click **Products → Supercharts** (or open any ticker and hit the full-chart button).
2. Type a ticker in the box at the top left and press Enter.
3. Pick your timeframe from the toolbar (1m, 5m, 15m, 1h, 1D…).
4. Choose **Candles** as the chart type.

The pieces of a TradingView chart you'll use: top toolbar, left drawing toolbar, chart, lower indicator pane, right watchlist.

MY INDICATORS

02 ADD LV'S INDICATORS

All of these live under **Indicators** in the top toolbar. Search the name and click to add.

INDICATOR	SEARCH FOR	SETTINGS
VWAP	VWAP	Default (resets each session)
5 EMAs	Moving Average Exponential	Add five times. Length 9, 21, 50, 100, 200, a different color each
Volume Profile	Volume Profile (Visible Range), or the Fixed Range drawing tool	Default value area 70%
RSI *(optional)*	Relative Strength Index	Not on my chart, but popular. Defaults: length 14, levels 70 / 30

For order flow I use **Bookmap**, a separate platform. See *The Hot Girl's Guide to LV's Indicators*. LV may earn a commission or reward when you sign up through these links.

To change a setting, hover the indicator's name at the top left of the chart (or its pane) and click the gear icon. Free plans limit how many indicators you can have on one chart, so if TradingView stops you, that's why.

FIB LIKE ME

03 FIB WITH MY SETTINGS

Fib isn't part of my everyday chart. I draw it only when there's a big breakout or strong trend and I'm waiting for an entry on the pullback, then take it off. Saving the settings once means it's ready when you need it.

1. Left toolbar → Fibonacci tools → **Fib Retracement**. Draw it on any clear swing (low to high on an uptrend).
2. Double-click it → **Style** tab. Turn on only: 0, 0.236, 0.382, 0.5, 0.618, 0.786, 1, 1.618, 2.618, 3.618, 4.236.
3. **Extend lines right: ON. Extend lines left: OFF.**
4. Color **0.236 and 0.382 red**.
5. Bottom of the window: **Template → Save Drawing Template As** (name it "LV Fib"), then **Apply Default** so every new Fib starts this way. This saves the drawing settings only; it doesn't put a Fib on your chart.

The full walkthrough is in *The Hot Girl's Guide to Fibonacci*.

SAVE IT

04 SAVE YOUR SETUP AS A TEMPLATE

1. With all your indicators on and set, click the **Indicators templates** button (the four-squares icon next to Indicators) → **Save Indicator template**. Name it "LV setup". Now any chart gets your whole setup in one click.
2. Your chart layout (tickers, drawings, timeframe) saves through the layout menu at the top right. Turn on autosave so you never lose your lines.
3. Build a watchlist in the right sidebar with the tickers you follow, so you can flip through them on the same setup.

LET IT TAP YOU

05 ALERTS

Alerts are how you stop staring at the screen.

1. Right-click a price level on the chart (or your Fib line, or a trendline) → **Add alert**. You can also press **Alt + A** (Option + A on Mac).
2. Choose the condition, like "Crossing" a price or an indicator (for example price crossing VWAP or the 200 EMA).
3. Pick how you want to be told: app notification, pop-up, email.
4. Name it so future-you knows why it went off: "at 0.618, check the candle."

An alert means **go look**, not **go buy**. When it fires, run your checklist.

HOT GIRL RULE: Set the levels while you're calm. Let the alerts call you when it's time.

My live trade alerts are a separate, optional add-on on Whop (**whop.com/the-run-club-611b**). Not included in any Run Club program, and you don't need them for anything in this guide.

— LV

Options involve risk and aren't suitable for everyone. Education, not financial advice. Nothing here tells you what to buy or sell, and no result is promised. Tools, indicators and levels describe what price has done; none of them predicts what it will do. You can lose all of the money you put into an option.

TRCA LLC, doing business as Run Club Academy. TradingView is an independent company; its name and features are described for education only and may change. Questions: therunclublv@gmail.com · **runclubacademy.com**
